Becoming AI-Driven
A Practical Approach

Overview

Artificial intelligence has become a buzz word in recent times due to the significant advancement of Neural networks in large language models (LLM's). This has been made famous by Open Ai's recent release of ChatGPT and the latest engine GPT 4.

Many AI companies have emerged by leveraging this new AI tech infrastructure to build tailored AI solutions for all work verticals.
With so much advancement happening at speed and at scale leaders must get to grips with this technology and think strategically about how to leverage its benefits while crafting rules and procedures for its use to reduce the risk of adverse effects
Here are more details:
